

# Assembly BUDDY

In order to avoid high shipping fees, we offer to ship BUDDY unmounted. The assembly is very easy. We show you how it is done.

Place the tabletop on a clean and soft surface with the screw holes facing upwards. Make sure not to scratch the surface. Loosely screw the four legs onto the tabletop. Do not tighten the screws yet!

Turn the table carefully.

Lift the seat over the table and place it onto the legs. Ensure that the disks on the bottom of the seat are aligned with the legs. For this step you will need the help of a second person.

Align the screw holes of each leg with the middle holes of each disk. Take the M10 screws and washers to screw the parts together loosely. Repeat this step with all legs. But do not tighten the screws yet!

As soon as all joints are connected, you can tighten all screws. Start by tightening the screws under the tabletop. As a last step tighten the screws under the seat.

Done!
