

# Assembly PICNIC

In order to avoid high shipping fees, we offer to ship PICNIC unmounted. The assembly is very easy. We show you how it is done.

Set up the side frames so they are facing each other. Apply the big steel sheet part for the tabletop onto the side frames. Please make sure to work on a flat surface to avoid tilting of the side frames. If needed, ask a second person for help.

Take the two big angles and the 4x M8 screws with washers.

Connect the angles with the big steel sheet part and the side frames by screwing them together loosely. Ensure that the angles are positioned correctly (see figure). Do not tighten the screws yet!

Apply the two slim steel sheet parts for the seats onto the side frames. Take two small angles and 2x M8 screws with washers for each steel sheet part. Ensure that the angles are positioned correctly (see figure). Loosely screw the angles together with the slim steel sheet parts and the side frames. As soon as all joints are connected, you can tighten all screws.

Apply the laminate sheets onto the corresponding steel sheet parts and screw them together loosely from below using the M6 screws and washers. As soon as all joints are connected loosely, you can tighten all screws.

Done!
